(Please forward to all commissioners)

Commissioners,

I again ask that you vote positive to apply for, and that you accept the Michigan Public Service Commission - Renewable Energy and Electrification Infrastructure Enhancement and Development Grant.

And if/when you vote to not move forward with this grant, I would like to know your reasoning. Exactly what it was that frightened you, considering the other frightening alternatives of today.

If time had allowed, I would have liked for any of you to review my solar project. I grow energy right next to where I grow tomatoes, peppers, beans and squash (organic, of course;). Perhaps another time.

Hey, here's a thought!

Leelanau County has become renowned the country and world over for its cheeses, wines and for so very much more. Our farm-to-table market also continues to climb up the charts. People from all over vacation here while those of us that live here full-time are truly fortunate.

Leelanau County could conquer an additional market with a new concept and slogan.

Farm to Table to Grid. Try it on for size – Farm2Table2Grid. Get the hashtag # while you can and move Leelanau County forward at the same time.

A solar installation at the Government Center would be the first step to a safer tomorrow for all of us...

Best,

John Hunter
Bingham Township
